

The Audiologist Is Your Partner in Hearing Health and Cognitive Health.

Hearing Loss has been associated with a decline in cognitive function and may lead to the **rapid progression of cognitive decline.** ^{1,2,3,4}

Untreated hearing loss can contribute to cognitive decline. Through the proactive management of hearing loss, you may delay or slow the progression of cognitive decline.

Routine cognitive screenings allow your Audiologist to **benchmark your current cognitive performance** and help ensure **your hearing correction solutions are right for you.**

During COVID-19 Times:

- Social isolation has an impact on your cognitive health.
- Hearing impairment and social isolation together could increase your chances of experiencing cognitive health decline.
- Your audiologist is your partner in assessing your cognitive performance. During these challenging days, now is the time to have your cognitive health assessed when visiting our office for your hearing needs.

Take control of your cognitive health and **improve your quality of life.**
